Gross Migration for Counties: 1975 to 1980

GENERAL

This report presents data on immigration, outmigration, and net migration for States and counties between 1975 and 1980 for the population 5 years old and over in 1980. Table 1 presents data on number of immigrants, number of outmigrants, and net migration for each State and county cross-classified by sex, race, and Spanish origin. Table 2 includes data on age and on military status and college attendance in 1975 or 1980. Tables 3 and 4 display the same data for New York city. Similar data for the period 1965 to 1970 were published in *Current Population Reports*, Series P-25, No. 701, "Gross Migration by County: 1965 to 1970."

DEFINITIONS

Residence in 1975—The data on residence in 1975 were derived from answers to question 15 on the 1980 Census of Population and Housing sample questionnaire which asked for the State (or foreign country), county, and city of residence on April 1, 1975. Residence in 1975 is used in conjunction with current residence to determine the extent of residential mobility of the population. When incomplete information on residence in 1975 was collected for a person, information for other family members was used, if possible, to allocate the missing information. All cases of nonresponse or incomplete response were allocated a value based on the previous residence of other persons with similar characteristics who provided complete information.

The category "immigrant" as defined for counties is a person who moves to a specified county from

another county in the United States or from abroad. An "outmigrant" for counties is a person who leaves a specified county and moves to another county within the United States. Thus, every move originating and ending within the United States is outmigration with respect to the county of origin and immigration with respect to the county of destination. For example, immigrants to Autauga County, Alabama, include persons 5 years old and over living in Autauga County, Alabama, on April 1, 1980, who reported a different county of residence in 1975, or who were living abroad in 1975. Outmigrants from Autauga County, Alabama, include all persons 5 years old and over who resided elsewhere in the United States on April 1, 1980, and who reported Autauga County, Alabama, as their place of residence in 1975. "Net migration" is the difference between immigration and outmigration. According to the direction of the difference, it may be net immigration or net outmigration. In the net migration figures, net outmigration is indicated by a minus (-) sign.

Immigrants and outmigrants for States include only those persons who did not live in the same State in 1975 and 1980 (i.e., they exclude persons who moved between counties *within* the same State on the two dates). Thus, the number of immigrants to (or outmigrants from) all counties in any State is greater than the number of immigrants to (or outmigrants from) that State. However, in the case of net migration (immigration minus outmigration), the sum of the figures for counties equals the State total.

The data on migration may understate the actual amount of movement between counties during the 5-year

period. Persons who migrated after April 1, 1975, but died prior to April 1, 1980, and persons who left a county after April 1, 1975, but returned to that county before April 1, 1980, are not counted as migrants. Also, migrants who made multiple moves during the 5-year period are counted as migrants only once.

Similar questions on mobility were asked in the 1940, 1950, 1960, and 1970 censuses. The questions in the 1950 census, however, applied to residence 1 year earlier rather than 5 years earlier. Although the questions in the 1940 census covered a 5-year period, comparability with that census is reduced somewhat because of different definitions and categories of tabulation. Comparability with the 1970 and 1960 censuses is also somewhat reduced because nonresponse was not allocated in those earlier censuses.

Armed Forces Status in 1975 or 1980—The data on military status in 1975 or 1980 were derived from answers to question 17 which asked persons 15 years old and over whether they were "in the Armed Forces," "attending college," or "working full or part time at a job or business" in 1975; and answers to questions 22, 25, and 26 on labor force status in 1980. Nonresponse was allocated based on answers to other questions and related characteristics. The data on military status in 1975 are shown only for persons 21 years old and over (i.e., persons who were 16 years old and over in 1975) while the data on military status in 1980 are shown for persons 16 years old and over.

College Attendance in 1975 or 1980.—The data on college attend-

ance in 1975 or 1980 were derived from answers to questions 8, 9, and 10 on school enrollment and years of school completed; and answers to question 17 which asked persons 15 years old and over whether they were "in the Armed Forces," "attending college," or "working full or part time at a job or business" in 1975. Nonresponse was allocated based on answers to other questions and related characteristics. The data on college attendance in 1975 are shown only for persons 21 years old and over (i.e., persons who were 16 years old and over in 1975) while the data on college attendance in 1980 are shown for persons 16 years old and over.

Sex—The data on sex were derived from answers to question 3, which was asked of all persons. At the time of field review, most cases in which sex was not reported were resolved by determining the appropriate entry from the person's given name and household relationship. When sex remained blank, it was allocated according to the relationship to householder and the age and marital status of the person.

Age—The data on age were derived from answers to question 5, which was asked of all persons. Only the information in items 5b and 5c (on month and year of birth) was read into the computer. Answers to item 5a (on age at last birthday) were used during field review to fill in any blanks in question 5c. The age classification is based on the age of the person in complete years as of April 1, 1980. The data on age represent the difference between date of birth and April 1, 1980.

In each census since 1940, the Bureau of the Census has assigned the age of a person when it was not reported. In censuses before 1940, with the exception of 1880, persons of unknown age were shown as a separate category. In 1960, 1970, and 1980, assignment of unknown ages was performed by a general allocation procedure.

Race—The data on race were derived from answers to question 4, which was asked of all persons. The concept of race as used by the Census Bureau reflects self-identification by respondents; it does not denote any clear-cut scientific definition of biological stock. Since the 1980 census obtained information on race through self-identification, the data represent self-classification by people according to the race with which they identify.

For persons who could not provide a single response to the race question, the race of the person's mother was used; however, if a single response could not be provided for the person's mother, the first race reported by the person was used. This is a modification of the 1970 census procedure in which the race of the person's father was used.

The category "White" includes persons who indicated their race as White, as well as persons who did not classify themselves in one of the specific race categories listed on the questionnaire but entered a response such as Canadian, German, Italian, Lebanese, or Polish. In the 1980 census, persons who did not classify themselves in one of the specific race categories but marked "Other" and wrote in entries such as Cuban, Puerto Rican, Mexican, or Dominican were included in the "Other" race category; in the 1970 census, most of these persons were included in the "White" category.

The category "Black" includes persons who indicated their race as Black or Negro, as well as persons who did not classify themselves in one of the specific race categories listed on the questionnaire, but reported entries such as Jamaican, Black Puerto Rican, West Indian, Haitian, or Nigerian.

If the race entry was missing on the questionnaire for a member of a household, an answer was assigned in the computer according to the reported entries of race of other household members using specific rules of precedence of household relationship. If race was not entered for anyone in the household (excluding paid employees), the race of a

householder in a previously processed household was assigned.

Differences in census procedures and reporting by respondents in the 1980 census and 1970 census seriously affect the comparability for certain race groups. First, a large number of Spanish origin persons reported their race differently in the 1980 census than in the 1970 census; this difference in reporting has a substantial impact on the population totals and comparability for the "White" population and the "Race, n.e.c." or "Other" race population (shown as "All other races" in most 1970 publications). A much larger proportion of the Spanish origin population in 1980 than in 1970 reported their race in the questionnaire category "Other." Second, in 1970, most persons who marked the "Other" race category and wrote in a Spanish designation such as Mexican, Venezuelan, Latino, etc., were reclassified as "White." In 1980, such persons were not reclassified but remained in the "Other" category. As a result of this procedural change and the differences in reporting by this population, the proportion of the Spanish origin population classified as "Other" race in the 1980 census was substantially higher than that in the 1970 census. Nationally, in 1970, only 1 percent of Spanish origin persons were classified as "Other" race and 93 percent as "White." The 1980 census sample data showed that a much larger proportion, 38 percent, of Spanish origin persons reported their races as "Other" and only 58 percent reported "White." As a consequence of these differences, 1980 population totals for "White" and "Race, n.e.c." are not comparable with corresponding 1970 figures.

The 1980 census was the first in which data were collected separately for Eskimos and Aleuts in all States. In 1970, these data were available only for Alaska. Since Eskimos and Aleuts are highly concentrated in Alaska, this change does not seriously affect the comparability of 1980 and 1970 data for these racial groups at the national level.

The 1980 total for the Asian and

Pacific Islander population reflects a high level of immigration during the 1970's as well as a number of changes in census procedures which were developed, in part, as a result of this high level of immigration. First, the number of Asian and Pacific Islander categories listed separately on the 1980 census questionnaire was expanded to include four additional groups: Vietnamese, Asian Indian, Guamanian, and Samoan. Asian Indians were classified as "White" in 1970 but were included in the "Asian and Pacific Islander" category in 1980. The Vietnamese, Guamanian, and Samoan populations were included in the "Other" race category in the 1970 census but were included in the "Asian and Pacific Islander" category in 1980. Second, "Other Asian and Pacific Islander" groups such as Cambodian, Laotian, Pakistani, and Fijian were identified and tabulated as Asian and Pacific Islander in sample tabulations in the 1980 census; in 1970, most of these groups were included in the "Other" race category.

The 1980 data were collected separately for Hawaiians and Koreans in all States, but in 1970, these data were not collected for Alaska. (On the 1970 census questionnaire used in Alaska, Eskimo and Aleut were substituted for these two categories.) Since the numbers of Hawaiians and Koreans were small in Alaska, this questionnaire change does not have a major impact on the comparability of the 1980 and 1970 data for Hawaiians and Koreans at the national level.

Spanish origin—Information on persons of Spanish/Hispanic origin or descent was derived from answers to question 7 which was asked of all persons.

Persons of Spanish/Hispanic origin or descent are those who reported either Mexican, Puerto Rican, Cuban, or other Spanish/Hispanic origin in question 7. Persons who reported "other Spanish/Hispanic" origin were those whose origins are from Spain or the Spanish-speaking countries of Central or South America, or they are persons identifying their origin or

descent as being Spanish, Spanish-American, Hispano, Latino, etc.

Origin or descent can be regarded as the ancestry, nationality group, lineage, or country in which the person or person's parents or ancestors were born before their arrival in the United States. It is important to note that persons of Spanish origin may be of any race.

Persons of more than one type of Spanish origin and persons of both a Spanish and some other origin(s) who were in doubt as to how to report a specific origin were classified according to the origin of the person's mother. If a single origin was not provided for the person's mother, then the first origin reported by the person was recorded. If any household member failed to respond to the Spanish/Hispanic origin question, a response was assigned by computer in the sample edit operation according to available related information such as ancestry and place of birth reported for the household member. If such information was not reported, origin was assigned from entries of other household members using specific rules of precedence of household relationship. If no origin was reported for any household member (excluding a paid employee), then an origin was assigned from another household with a householder of the same race.

A preliminary evaluation study of the reporting in the 1980 census item on Spanish origin indicated that there was misreporting in the Mexican origin category by White and Black persons in certain areas. The study results showed evidence that the misreporting occurred in the South (excluding Texas), the Northeast (excluding the New York City area), and a few States in the North Central Region. Also, results based on available data suggest that the impact of potential misreporting of Mexican origin in the 1980 census is severe in those portions of the above-mentioned regions where the Spanish origin population is generally sparse. However, 1980 census data on the Mexican origin population, or total Spanish origin population, at the national level, are not seriously affected by the reporting problem.

The 1980 data on Spanish origin are not directly comparable with those of 1970 because of several factors, namely, overall improvements in the 1980 census, better coverage of the population, improved question design, and an effective public relations campaign by the Census Bureau with the assistance of national and community ethnic groups. These efforts at census improvement explain, in part, the large increase in the number of Spanish origin persons reported in the 1980 census over the 1970 census. Also, these efforts undoubtedly resulted in the inclusion of a sizable but unknown number of persons of Spanish origin who are in the country in other than legal status.

In the 1980 census Spanish origin question, specific changes in design from the 1970 question included the placement of the category "No (not Spanish/Hispanic)" as the first category in that question. (The corresponding category appeared last in the 1970 question.) Also, the category "Central or South American" was deleted because in 1970 some respondents misinterpreted the category; furthermore, the designations "Mexican-American" and "Chicano" were added to the Spanish origin question in 1980. In the 1970 census, the question on Spanish origin was asked of only a 5-percent sample of the population; in the 1980 census, the Spanish origin question was asked of everyone in the Nation.

SYMBOLS USED IN TABLES

- A dash "--" represents zero or a percent which rounds to less than 0.1.
- Three dots "..." mean that the data are being withheld to avoid disclosure of information for individuals.

LIMITATIONS OF THE DATA

Data on residence in 1975 are based on approximately one-half of the full census sample. Therefore, figures in tabulations involving residence in

1975 may differ from tabulations based on the full sample. For example, the number of persons 5 years old and over derived from residence in 1975 tabulations may not agree with tabulations by age shown in other publications which are based on the full sample. Since the data in this

publication are based on a sample, they are subject to sampling variability, that is, variation that occurred by chance because a sample rather than the entire population was surveyed. Estimated standard errors and a detailed discussion of the accuracy of the data can be found in ap-

pendix D of the 1980 Census of Population, *Detailed Population Characteristics*, PC80-1-D. Other detailed information on technical and procedural matters concerning the 1980 Census of Population and Housing or the geographical mobility tabulations appear in those reports.
